

CP317A - Group Project

Final Project Submission: Complete System Delivery

Due Date: Wednesday, December 3, 2025, 11:59 PM (MyLS submission)

Purpose & Overview

The Final Submission concludes the project by delivering a fully functional system, all finalized documentation, and a complete demonstration. This submission consolidates the work of Milestone 01, Milestone 02, and Sprints 01-03 into one comprehensive and professionally prepared package.

Submission Checklist

Your submission must consist of the following distinct items:

1. **The Project Report:** One single PDF containing sections 1–8 listed below.
2. **Final Product Backlog:** The Excel file (submitted as a separate attachment).
3. **The Codebase:** Source code, build instructions, and environment files.
4. **Demo Video:** A 10-minute MP4 file or a direct link (YouTube/Drive).
5. **Presentation Slides:** The PowerPoint file used for your video.
6. **Team Blog:** The team's contribution log.

Part A: The Project Report (Single PDF)

Your PDF must follow this exact structure:

1. Cover Page

Must include:

- Course code & Project Title
- Group ID
- Team member names & roles (Highlight the **Product Owner**)
- **Link to Public/Private GitHub Repository** (requirement for accessibility)

2. Final Project Description (½ – 1 page)

Provide a concise executive summary including:

- **Purpose:** The problem being solved and the value provided to the customer.
- **Target Audience:** Who is the customer/user group?
- **Features:** A summary of the main features delivered in the final version.

3. Final Product Backlog (1-2 pages + Excel Attachment)

- **Subsection A: Completed Stories.** List all **DONE** stories, including Story ID, Title, Priority, Points, and Sprint Assignment.
- **Subsection B: Remaining/Deferred Stories.** List any stories not fully implemented or postponed.
- **Subsection C: Reference.** State clearly that the full Excel file is attached to the submission.

4. Design Document (1-2 pages)

Provide an updated design section reflecting the *final* delivered system:

- A. System Architecture: A short description and a high-level diagram.

- B. Final UI Screens: Screenshots or final wireframes of key views.
- C. Design Decisions: Highlight major technical decisions (Frameworks, Database Models, Workflow logic).

5. User Manual (1-2 pages)

A "Quick Start" guide for the evaluator:

- How to install/run the system.
- **Test Credentials:** Username/Password for testing.
- Step-by-step instructions for major features.

6. Summary of Testing (1-2 pages)

- A. Methodology: Summary of Unit, Integration, and Manual functional tests performed.
- B. Results Table: Create a table for major stories containing: Story ID, Test Performed, Expected Result, Actual Result, and Pass/Fail status.
- C. Known Issues: A transparent list of bugs or limitations.

7. Ethical Dimensions Report (2 pages)

An analysis covering:

- Privacy risks, security considerations, and mitigations.
- Accessibility and Fairness/Bias considerations.
- **Reflection:** What was implemented vs. what could be improved.

8. Final Reflection (½ page)

A short summary answering:

- What is fully completed?
- What was the biggest technical challenge?
- What would you improve with more time?

Part B: Project Artifacts (External Files)

1. Final Demo Video (Max 10 Minutes)

Format: MP4 file or Link (YouTube Unlisted/OneDrive). Your video must demonstrate:

- **Introduction:** Identify the customer and the product value.
- **Walkthrough:** A complete demonstration of the system features.

2. Running System (Source Code)

Format: Zip file or Git Link Submit:

- Complete Source Code/Build.
- README.md containing Setup Instructions and environment requirements.
- Test accounts/Database seed files.

3. Final Team Blog

Submit a copy of your blog containing meeting logs, contribution details, and signatures from all members.

4. Presentation Slides

Submit the PowerPoint file used in your video. It must follow this structure:

Slide Section	Content Requirement
1. Introduction	Project title, team, customer definition
2. Customer Problem	Real need & pain points
3. Product Value	Benefits, impact, what makes it useful
4. System Overview	Architecture, modules, workflow
5. Feature Walkthrough	Screenshots, main features, demo segments
6. Ethical Summary	Key ethical considerations + mitigations
7. Conclusion	What's done, future work, acknowledgments

Evaluation Criteria (20 Marks Total)

This section fills the missing gap in the original document.

Component	Marks	Criteria
System Functionality & Code	6	System installs and runs as documented; Major features are functional; Code is clean and organized.
Final Report (PDF)	6	Completeness of all 8 sections; Depth of Ethics Report; Clarity of Design and Testing documentation.
Demo Video & Presentation	4	Clarity of communication; Professionalism; Adherence to time limit; Quality of slides.
Process (Backlog & Blog)	2	Accurate backlog tracking (Done vs. Remaining); Evidence of consistent team contribution via Blog.
User Manual & Usability	2	Ease of setup for the evaluator; Clarity of instructions; UI/UX quality.
TOTAL	20
